

Guttapercha Points

Description

Guttapercha Points are a filling material that has been tried and tested for decades for permanent filling therapy - mostly in combination with a sealer - of root canals.

Application

In most cases the Guttapercha Points are mixed with red color pigments in the production. This gives them their characteristic bright red hue. In later developed variants, the product is mixed with other color pigments according to ISO-color coding. This gives the dentists extra help and safety in choosing the right size. As a third variant, Alfred Becht GmbH offers Guttapercha Points in which only the end is color-coded.

Properties

- meets the requirements of ISO 6877
- tapered, 28 mm overall length
- consistently smooth surface for easy penetration and sliding along tissue
- dimensionally stable but still flexible

Composition

- Guttapercha
- Zinc oxide
- Barium sulfate
- Color pigments
